

مزايا الشحن الجوي

Fast delivery

Low damage

span

save related

The flight speed of airplanes is about 600 kilometers to 800 kilometers per hour, which is much faster than other means of

transportation. This feature of air freight meets the needs of some timesensitive cargo. After the cargo is loaded on the plane, it is difficult to cause damage to the cargo in the air.

Therefore, the damage rate of the cargo is low and the safety is good in the entire cargo transportation link. In a limited time, the space span of the aircraft is the largest. Air freight can save related costs for production companies. Due to the speed of air transportation, it can speed up the circulation of production enterprises' commodities,

there by saving product storage fees, insurance premiums and interest expenses, etc.
