

Customer background:

Customers need to export multiple batches of 20-foot custom house containers (self-provided cabinets, SOCs) to Canada, Japan and the Caribbean for overseas project construction. This type of house container is a non-standard structure, and some shipping companies have concerns about compliance, safety and dock stacking, which makes it extremely difficult to arrange shipments.

Customer pain points:

- *The house container structure is special and does not fully comply with the sea standard cabinet specifications. Some shipping departments refuse to take it
- *Different destinations and complex routes, involving customs clearance standards and import restrictions in multiple countries
- *Use special cabinets or third-party storage and transportation, high cost, long cycle and high operational risks

For more details, please click: [SCO Container](#)

1. 20 feet custom SOC house container is a special transport container.
2. It can be used to load cargo with widths exceeding the end door width.
3. We can provide customized colors and logos.
4. Delivery time: 30 days
